## poultry and eggs

FPE 1-76  
January 1976

WORLD POULTRY MEAT PRODUCTION EXPANDING  
BUT EGG PRODUCTION REMAINS UNCERTAIN

### Poultry Meat Production

Profitability improved for poultry meat production in most major commercial countries by the summer of 1975 and is expected to continue favorable during the first half of 1976. Although feed/product price ratios have not increased very much in the European Community, there is much more optimism in late 1975 compared with the last half of 1974. Total world poultry meat production is expected to reach about 15.2 million metric tons in 1976--about 4 percent over 1975 levels. Broiler production is forecast to increase about 4 percent to 9.9 million tons, and turkey production is expected to reach 1.4 million tons.

The U.S. share of world poultry production will gain slightly in 1976 from 34 percent in 1975 because U.S. output is expected to increase about 8-9 percent. EC total poultry meat production is forecast to increase about 3 percent in 1976, totaling 3.2 million tons (nearly two-thirds broilers). Because of the 1975 drought in the USSR, the Soviets have increased hog and poultry slaughter sharply since July. Thus 1975 poultry meat production increased sharply to 1.6 million tons--up 14 percent from that of 1974.

### Egg Supply

Total 1975 egg production in major commercial countries is estimated at 288 billion eggs, up about 1 percent from the 1974 level. Egg production in these countries during 1976 is expected to increase about 2 percent or to a record level of about 294 billion. Important egg producing countries and their percent of the 1975 total are: United States, 22 percent or 64.3 billion; EC, 21 percent or 63.4 billion; USSR, 19 percent or 57.4 billion; and Japan, 10 percent or 29.5 billion. Egg production declined in 1975 in the United States by 2 percent; Canada, 2 percent; Japan, 3 percent; U.K., 3 percent; Belgium-Luxembourg, 2 percent; and Netherlands, down slightly. Egg production increased in the other EC countries and in the USSR.

### 1975 Summary

Much of the first half of 1975 was a struggle to get out from under the cost-price squeeze that existed in 1974. The continuation of the cost-price

squeeze into 1975 and the sluggish general economic situation were mainly responsible for the decline in poultry meat production in 1975 compared with 1974 in the United States and some of the EC countries. However, preliminary 1975 estimates of poultry production in the major commercial countries indicate a 2 percent increase from the 1974 level to 14.6 million tons. (This includes FAS estimates for 1975 production in the East European countries, for which 1975 data are not available.)

By the summer of 1975, improved profitability and some optimism returned to poultry meat producers. Feed prices had declined substantially from the fall/winter 1974/75 period, and product prices had increased. In the United States, the sharp reduction in pork supplies plus the decline in total poultry production helped to maintain good prices for broilers and turkeys. U.S. broiler production is now estimated to increase slightly from 1974 levels to 3.7 million tons. Total U.S. poultry meat production is estimated to be 4.8 million tons--down 2 percent from the 1974 level.

In the EC, the preliminary 1975 total poultry production estimate at 3.2 million tons is slightly above that for 1974. Broiler production decreased slightly to 2.1 million tons and turkey meat production declined 2.5 percent to 351,000 tons. France was the largest broiler producer in 1975, but Italy ran a close second. The U.K., the Netherlands, and West Germany are the other major EC broiler producing countries. Italy surpassed France as the major turkey producer in the EC in 1975. The United Kingdom is the third largest turkey producer in the EC.

Estimated French broiler production declined to 519,000 tons in 1975--down about 1 percent from 1974. Turkey production is estimated at 100,000 tons--about 15 percent less than the 117,000 tons produced in 1974.

Italy continued to produce more total poultry meat than any other country in the EC in 1975. It also passed France as the leading EC turkey producer. Total poultry meat production in Italy in 1975 is estimated at 889,000 metric tons--up 6 percent from the 838,000 tons produced in 1974. Broiler meat production increased 6 percent to an estimated 510,000 metric tons. Turkey meat production increased to 119,000 tons--up 10 percent from 1974.

The United Kingdom, as the third largest poultry producer in the EC, produced slightly less total poultry meat in 1975 than in 1974. Total poultry meat production is estimated at 650,000 tons compared with 656,000 in 1974. Broiler production decreased about 2 percent to 470,000 tons. Turkey meat production increased slightly to 92,000 tons.

Japan's 1975 total poultry meat production is estimated at 747,000 tons or about the same as in 1974. Most of Japan's poultry meat is broiler production. At 612,000 tons, Japanese broiler production was up about 1 percent from the 1974 level.

In the USSR, total poultry meat production is estimated at 1.6 million tons--up 13 percent from that of 1974. Early in 1975, poultry meat production had been estimated at about 1.5 million tons. The drought last summer that resulted in a very short grain crop influenced poultry meat

production during the last half of 1975. Poultry numbers have declined more sharply than the seasonal decline from the midsummer peak observed during the past 2 years. Numbers on collective and State farms on January 1, 1976, are estimated at 360 million head--10 percent below those of a year ago.

Canadian poultry meat output in 1975 declined to 424,000 tons compared with 469,000 in 1974--a decrease of 10 percent. Broiler production fell from 322,000 tons in 1974 to 297,000 in 1975. Turkey production decreased from 110,000 tons in 1974 to 95,000 in 1975.

### Outlook for 1976

Led by increases in broiler and turkey meat, world poultry meat production is expected to expand about 4 percent in 1976 to an estimated 15.2 million tons. Placements of broiler chicks in the United States and the EC during July-October increased sharply from the comparable period in 1974. This expanded production level is expected to continue in 1976. Because first-half broiler and turkey production was down sharply from 1974 levels, sharp increases are expected when comparing the first half of 1976 with the same period of 1975. For all 1976, world broiler and turkey meat output is expected to reach 9.9 million tons and 1.4 million tons, respectively.

The egg sector is still struggling under reduced consumer demand for eggs and a relative cost-price squeeze for producers. Placements of laying chicks in the EC for the period January-September were down about 3 percent from the same period in 1974. This will result in lower egg production in the first half of 1976. Most of the decline will likely be in Belgium, United Kingdom, and West Germany. However, layer chick placements in France were up about 5 percent for this period and production is expected to rise in 1976. Egg output in the United States is expected to rise only about 1 percent in 1976. World egg production in 1976 is forecast at 294 billion eggs--2 percent above that of 1975.

### UNITED STATES

Substantial increases in broiler and turkey meat production are expected in 1976. Poultry meat production is estimated to total 5.3 million tons, or about 400,000 tons above that of 1975. Both turkey and broiler meat should show sharp gains. U.S. broiler output may reach a record high of 4 million tons in 1976. Although preliminary data indicate 1975 turkey meat production was down 7 percent from 1974, production in 1976 is expected to show a sharp turnaround and be near the record level of 877,000 tons in 1973.

Improved profitability caused broiler producers to expand their production sharply during the last 4 months of 1975. Early indications are that output will continue about a tenth larger during the first half of 1976.

Turkey producers are expected to increase production for first half 1976 by about 15-20 percent over the same period of 1975.

Egg production in 1976 may show a slight increase from the 64.3 billion level of 1975 but be less than the 65.9 billion produced in 1974. Layer numbers are expected to continue to increase some in early 1976 and move above year-earlier levels. Large numbers of force molted birds may be removed from flocks after Easter. This would result in egg output dropping back near year-earlier levels during the second quarter.

#### CANADA

Total poultry meat production is forecast at 445,000 tons in 1976--an increase of 21,000 tons or about 5 percent. Broiler production, the major component, is expected to increase from 297,000 tons to 310,000--an increase of about 4 percent. 1976 turkey production is forecast at about 100,000 tons--up 6 percent.

Canadian egg production in 1976 is expected to increase about 1 percent to 5.5 billion eggs. Canada, like the U.S., has been experiencing declining consumption of eggs. In an effort to stabilize egg prices, the Canadian Government and provinces reestablished the Canadian Egg Marketing Agency and have placed quotas on egg imports. This action has interrupted trade, restricting the free movement of eggs in North America.

#### JAPAN

Encouraged by lower feed prices and stronger demand for poultry meat as a pork substitute, chick placement increased in the summer of 1975 and was expected to remain above year-ago levels for the remainder of 1975. Thus, Japan's total poultry meat production is forecast at 749,000 tons in 1976--up slightly from the 1975 level. Broiler production is expected to be about 615,000 tons--up slightly from the 1975 level. Turkey meat production is on a small scale and is expected to remain less than 500 tons.

After the U.S., the Soviet Union, and the EC, Japan is the fourth largest egg producer. Although Japan's production adjustment program to freeze the flock size of producers with more than 3,000 birds will continue, projected 1976 egg production is expected to increase slightly to 30 billion eggs, compared with 29.5 billion in 1975 and 30.3 billion in 1974.

The high prices for beef and pork in Japan have sparked the consumption of chicken and have resulted in record-high prices for chicken. The wholesale price for chicken in Tokyo on October 15 was ¥363 per kilogram (53.8 U.S. cents per pound), compared to a high of ¥330 (48.9 U.S. cents per pound) in 1974.

#### EUROPEAN COMMUNITY

Total poultry production is expected to increase about 3 percent or to 3.2 million tons in 1976. All EC countries are forecasting some increase in total poultry meat output. Egg production is forecast to increase to 64.3 billion eggs--up over 1 percent from the 1975 level. France accounts for most of the increase in egg output with an expected increase of almost

1 billion eggs. Egg production in Denmark and Italy is expected to decline in 1976. About two-thirds of EC poultry meat production is from broiler output. France is the leading broiler EC producer, with Italy a close second. Combined, France and Italy produce about half of the EC broiler output.

Turkey production in the EC remains relatively small compared with that of the U.S. Italy is the leading producer, with France in second place. France and Italy are expected to produce about two-thirds of EC turkey output in 1976.

On the surface, the EC accounts for a large share of world export-import trade in poultry products. While the EC makes up over two-thirds of total world imports and 80 percent of total world exports, a large proportion of this is intra-community trade. About 90 percent of Dutch poultry meat exports go to other EC countries, with most of this going to West Germany.

In Belgium-Luxembourg, 96 percent of poultry meat imports and 90 percent of exports originate in or are destined for other EC countries. West Germany gets about 87 percent of its poultry imports from other EC countries, Ireland and the United Kingdom poultry export-imports involve the EC completely. For Italy, France, and Denmark, intra-EC trade makes up about half of the poultry meat exports and imports. As might be expected, the percentage of egg trade involving other intra-EC countries is as much or greater than that for poultry meat. On balance, 70 percent of EC exports of poultry meat is intra-community trade.

#### DENMARK

Denmark expects to increase total poultry meat production about 7 percent to 93,000 tons or near the record 1974 level of 95,000 tons. Broiler production, after declining in 1975, is forecast at 79,000 tons, up 7 percent from 1975 and at the record level of 1974. Danish turkey output is very small--estimated at only 5,000 tons. Denmark still exports a large percentage of its poultry meat production, but mostly to other EC member countries. Egg production is expected to decline about 6 percent and is forecast at 1.2 million eggs.

#### FRANCE

French total poultry meat production is forecast at 826,000 tons, up slightly from 1975 but about 1 percent less than the record 1974 level of 833,000. Broiler meat production is estimated at 521,000 tons--up slightly from 1975 and about the same as the 1974 level. However, French broiler meat prices during fall 1975 deteriorated from summer-1975 high levels and were below the comparable 1974 price during October 1975.

Turkey output has increased sharply in France in recent years. Compared with the 1967-71 average, French turkey production has increased  $3\frac{1}{2}$ -fold. French egg production is expected to increase to a record level of 14 billion eggs--up 7 percent from the 13.2 billion produced in 1975.

## ITALY

Italy, as the largest poultry meat producer in the EC, is expected to increase total poultry meat production to 905,000 tons, about 2 percent more than in 1975. Italy's 1976 broiler production is expected to be up 1 percent to 515,000 tons, which is about 1 percent less than that for France. Turkey production is forecast at 125,000 tons--up 5 percent from that of 1975. Egg production, however, is forecast to decline about 2 percent to 11.4 billion eggs, compared with 11.7 billion in 1975.

Increased tourism during the summer of 1975 helped firm poultry meat prices. Prices weakened in the fall. The market for brown eggs continues good. However, the buildup in flocks could result in a surplus egg situation early in 1976.

## WEST GERMANY

West Germany's total poultry meat production is forecast at a record 287,000 tons--up 3 percent from that of 1975. Broiler production is also expected to reach a record level of 190,000 tons--up about 4 percent from 1975. There has been some recovery in broiler price levels in West Germany in recent months and this has given impetus to production.

Turkey production is forecast to increase slightly to 19,000 tons, compared with 18,000 in 1975. Egg prices have not recovered to the same extent, as broiler prices and production is forecast to rise only slightly to 15.3 billion eggs--up about 1 percent from the 1975 level.

## NETHERLANDS

The Netherlands are expected to reverse the 2-year decline in poultry production in 1976. Total poultry meat production is estimated at 310,000 tons, compared with 295,000 in 1975 and 315,000 in 1974. Broiler meat production is estimated at 260,000 tons, compared with 252,000 in 1975 and 267,000 in 1974. Turkey meat production is expected to increase slightly to about 15,000 tons, compared with 14,000 in 1975 and 17,000 thousand in 1974. Dutch egg production is forecast at 4.8 billion eggs, or about the same as in 1975.

The 1976 Dutch broiler export picture will be influenced by West Germany's broiler output. In 1975, increased West German broiler production reduced Dutch exports to this important market, and as a result caused sharp cuts in Netherlands' slaughter and reduced parent stock inventory. Increased Dutch exports to other EC countries were more than offset by the decline to the West German market. Denmark is also providing increased competition for Dutch exports to the West German market. The Dutch face increased competition from East European countries in important markets outside of the EC.

## UNITED KINGDOM

Total poultry meat production is forecast at 681,000 tons--a record, and up about 5 percent from that of 1975. Broiler meat production is forecast at 495,000 tons--up 5 percent from the 470,000 tons in 1975. Turkey meat

production is forecast at 98,000 tons, compared with 92,000 in 1975. Egg production is expected to increase slightly to 13.2 billion eggs, compared with 13 billion in 1975.

Poultry meat expansion should continue well into 1976 because demand is expected to strengthen. Real disposable income fell in the April-June 1975 period (-3 percent from that of the previous quarter) and further falls in living standards, along with high unemployment rates, may increase consumption of the lower cost meats such as chicken.

In 1976, broiler prices should be firm in the first part of the year but could deteriorate as heavier placings, because of current good returns, begin coming into the market place.

Increased egg placings since April 1975 have brought a warning of over-production in 1976. Eggs have recovered from their midsummer depressed producer prices of about 30 U.S. cents per dozen to about 52 U.S. cents in October and should strengthen further in the winter period. Egg producers still have a propensity to overproduce, and a severe summer price break may again occur in 1976.

In 1976, further increases are expected for broiler meat imports, regardless of prices, because of further integration of EC markets and continued exclusion of third-country suppliers through variable and supplementary levies.

#### SOVIET UNION

The severe drought in the Soviet Union in 1975 has altered the USSR poultry meat production outlook for 1975 and possibly for 1976. Poultry slaughter has run higher than earlier expected in recent months. While there are no data available as to the composition of present Soviet poultry numbers, it is certain that inventory cutbacks resulting from slaughter increases made during most of the last half of 1975 will probably have to remain for at least the first half of 1976.

Available grain supplies will force reductions of poultry output from the 1975 level. The Soviets simply will not be able to expand their poultry production until some new crop grain is available. Although it is tentatively estimated that 1976 Soviet poultry production may be about the same as that in 1975, there is a good possibility that it will be less.

---

NOTE: The Foreign Agricultural Service plans to publish an outlook circular on the poultry and egg situation in the major commercial countries on a quarterly basis. A data base is being developed that will include supply and distribution data for total poultry meat, broilers, turkeys, other chicken, other poultry, and the egg sector. At this time the data base is almost complete. As the data series for each country is reviewed, it will be published. These series will start with 1964 for all countries that have data available. This edition carries the data series from 1972 through 1975, with projections for 1976 that were available for total poultry meat, broilers, turkeys, and eggs.

## poultry and eggs

FPE 2-76  
March 1976

### WORLD POULTRY MEAT PRODUCTION FORECAST TO INCREASE 4 PERCENT IN 1976— WORLD EGG PRODUCTION UP 2 PERCENT

#### Poultry Meat Production

Poultry meat production in the major commercial countries in 1976 is still expected to expand about 4 percent over the 1975 level. The profitability in poultry meat production is forecast to remain as favorable as that experienced during the first quarter of 1976. Total world poultry meat production in 1976 is estimated at 15.2 million metric tons compared with 14.6 million tons in 1975. Broiler production, which comprises approximately two-thirds of world poultry meat production, is forecast to increase about 5 percent to 10.0 million tons, while turkey production is expected to reach 1.5 million tons—up 7 percent.

In 1976, the United States will produce about 34 percent of total world poultry meat production—a slightly higher percentage than in 1975. A survey of U.S. turkey producers in January indicates output is expected to increase about 6-7 percent from 1975 levels. The United States produces nearly 60 percent of the world's turkey meat.

In the European Community total poultry meat production is expected to increase about 4 percent—totaling 3.4 million tons (about two-thirds broilers). West Germany and the United Kingdom have increased their 1976 poultry production estimates since the first quarter report, while the rest of the EC countries remain about the same. West Germany and the United Kingdom expect record poultry meat production at 300,000 tons and 700,000 tons, respectively. Spain has become a major poultry producer in Europe with total poultry meat output in 1976 forecast at 600,000 tons—up 9 percent from that of 1975. Spain now ranks as the fourth largest poultry producer in Europe. The 1975 drought in the USSR has forced a further reduction in the 1976 forecast of their poultry meat production. Output is

expected to decline about 12 percent to 1.4 million metric tons, which is about the same level as that for 1974.

#### Egg Supply

Total egg production in 1976 in major commercial countries is estimated at a record 293 billion eggs—up 2 percent from 1975. Important egg producing countries and their share of the 1976 total are: United States, 22 percent or 65.0 billion eggs; EC, 22 percent or 63.3 billion; USSR, 20 percent or 58.0 billion; and Japan, 10 percent or 30.3 billion. Egg production in 1976 is expected to increase slightly in the United States, USSR, Japan, Belgium-Luxembourg, France, and Italy. Major producing countries whose egg production is expected to decline in 1976 are: Argentina, Australia, Canada, Denmark, the Netherlands, the United Kingdom, and West Germany.

#### Outlook for 1976

The outlook for 1976 as presented in the January statement continues about the same in the world poultry industry. Led by increases in broiler and turkey meat, world poultry meat production is expected to expand about 4 percent in 1976 to an estimated 15.2 million tons. Placements of broiler chicks have significantly exceeded year-ago levels for the last 6-8 months in some of the major broiler producing countries.

The egg sector appears generally somewhat better off than in 1975, but is still having difficulties in some of the EC countries. However, during the first part of 1976 egg prices have steadied and feed prices have eased. Thus, with improving general economic conditions, and reduced egg production in some countries, world egg producers should experience better times in 1976 than in 1975. World egg production in 1976 is forecast at 293 billion eggs—2 percent above that for 1975.

early 1976 by increasing production. Broiler production exceeded year-ago levels by 11 percent during the last quarter of 1975. Broiler chick placements and eggs set for 1976 marketings through April are expected to be up about 9 percent from those of a year ago.

Prospects for favorable profit margins should result in the coming months in broiler producers placing more chicks than a year earlier.

Substantial increases are also expected in turkey meat production in 1976. Turkey producers are responding to the improved price/cost situation by increasing turkey poult placements. Turkey production is forecast at about 875,000 tons—up 7 percent from that of 1975.

Currently egg production is expected to increase about 1 percent to 65.0 billion eggs in 1976. Layer numbers on January 1 were 2 percent below those of January 1, 1975. About 4 percent more replacement pullets will enter the laying flock in January-March, but 6 percent fewer in April-June compared to the first half of 1975. Producers' decisions regarding forced molting of old layers just after the peak Easter demand period will significantly affect the size of the laying flock and thus egg production.

**CANADA.** Canadian egg production in 1976 is expected to decline about 1 percent to 5.3 billion eggs. In Canada, as in the United States, consumption of eggs has been declining. In an effort to help stabilize egg prices, the Canadian Government and Provinces have reestablished the Canadian Egg Marketing Agency and have placed quotas on egg imports. The U.S. quota is 100,000 cases of shell eggs for 1976. There are additional quotas for egg products as well.

During the first half of January, Canadian broiler chick placements were up 18 percent, with eggs for broiler type chicks placed in incubators up 13 percent compared to the same period in 1975. Total 1976 poultry meat production is forecast at 447,000 tons, an increase of 6.4 percent over the 1975 level. Broiler production is expected to increase 4 percent to 313,000 tons. Turkey production is expected to increase about 15 percent to 100,000 tons—approaching the level of 1973 and 1974. Canada also has a quota on turkey meat imports.

**JAPAN.** Japanese broiler producers are expected to increase their 1976 output by about 5 percent to 640,000 tons in response to higher product prices and stabilizing feed costs. For 1976, a continuing increase is expected in poultry demand as a substitute for higher priced pork. Japan's total poultry meat production is forecast at 777,000 tons in 1976—up 3.5 percent from 1975.

Japan is the world's fourth largest egg producer. Projected 1976 egg production is up 3 percent to 30.3 billion eggs.

Continued high prices for beef and pork have sparked the consumption of chicken and thus chicken prices have risen also.

**EUROPEAN COMMUNITY.** Total poultry meat production is expected to increase by over 4 percent to 3.3

million tons in 1976 with all the EC countries forecasting some increase in poultry meat output.

Egg production is forecast to decrease slightly to 63.3 billion compared to 63.5 billion in 1975. Belgium-Luxembourg, France, Ireland and Italy expect some small increase in their 1976 egg production. The other EC countries expect declines, with Denmark forecasting almost a 10 percent decline.

About two-thirds of EC poultry meat production is broiler output. France is the leading broiler producer with Italy and the United Kingdom tied in a close second. Combined, France, Italy, and the United Kingdom produce about 70 percent of the EC's broilers.

Turkey production remains relatively small compared to that of the United States. The EC countries in total produce less than half as much turkey meat as does the United States. Italy is the leading producer with France and the United Kingdom somewhat back in second and third place. These three countries produce almost 90 percent of the EC's turkey meat.

As in recent years, the EC accounts for a large share of world export-import trade in poultry products. A large proportion of the EC export-import trade is intracommunity. West Germany is the major importer, receiving most of its imported poultry meat from the Netherlands, France, and Denmark. Although the Netherlands is not one of the top three EC poultry producers, it is the largest exporter, shipping mostly to West Germany. Denmark and France, however, ship less than half of their poultry meat exports to other EC countries.

## Changes in Gate Prices and Levies

Gate prices, in units of account, were reduced by around 3 percent between February 1, 1975 and February 1, 1976. However, as a result of devaluation of EC currencies in relation to the U.S. dollar, the decrease in U.S. cents per pound on the German market averaged around 15.5 percent. Variable levies, on the other hand, were increased by around 138 percent in units of account and around 112 percent in U.S. cents per pound.

The reason given for the large increase in variable levies was the decrease in world grain prices relative to EC grain prices. (One element of the variable levy is the difference between the cost of the quantity of grain required to produce 1 pound of poultry meat at world grain prices compared with EC grain prices, with given meat-grain conversion ratios for each area.)

Supplementary levies (designed to equalize offer prices for import into the EC with gate prices) fluctuated considerably during the year, with February 1, 1976 levels reduced to zero for whole turkey and down from year earlier levels by amounts ranging from 74 percent for turkey breasts and thighs to 11 percent for whole broilers. The principal reason for the decrease in supplementary levies was the increase in offer prices relative to gate prices.

The net result of offsetting changes in variable and supplementary levies on total import charges was a

decrease in total charges on boned poultry, turkey halves and quarters, turkey breasts, thighs, and drumsticks, and increases on all other poultry items.

**DENMARK.** Denmark expects to increase total poultry meat production about 6 percent in 1976 to 93,000 tons, near the record 1974 level of 95,000 tons. Expected egg production will decline sharply in 1976 to 1,150 million eggs compared to 1,270 million in 1975. This is about twice the decline in egg production forecast in January.

**FRANCE.** Total French poultry meat production is forecast at 826,000 tons—up slightly from that of 1975, but 1 percent less than the record 1974 level of 833,000. Broiler meat production is estimated at 520,000 tons—also up slightly from the 1975 level, but down slightly from the 1974 level. Ending 1975 poultry meat stocks were less than half of the ending stocks for 1973 and 1974. Some small stock building is expected during 1976. The French poultry producers are concerned that a possible broiler meat oversupply will result in downward pressure on prices, and thus force more reliance on exports as a market outlet.

Turkey production should recover from that of 1975, when production fell sharply because of several bankruptcies in 1974. Consumption, down substantially in 1975, should stabilize in 1976 and exports are expected to be sufficient to dispose of any oversupply.

Egg consumption lagged behind production during 1975 causing ending stocks to increase. Weak egg prices are still forecast for 1976 as stocks continue to increase. Egg production is forecast to increase about 3 percent to 13.5 billion eggs compared to 13.2 billion in 1975.

**ITALY.** Italy continues to be the EC's largest poultry meat producer and is expected to increase total poultry meat output about 5 percent to 900,000 tons. Italy's broiler production in 1976 is forecast at 510,000 tons—about the same as for the United Kingdom but 2 percent less than that for France.

High prices for poultry and eggs and a low domestic supply relative to demand caused a considerable increase in imports of poultry and shell eggs, especially during the last quarter of 1975. Expected production increases in 1976 should reduce the need for imports. Consumers are eating more turkey meat because of its comparatively low price. Turkey production is forecast to expand in 1976 to help meet this demand.

**WEST GERMANY.** The total poultry meat production estimated for West Germany in 1976 has been revised upward to 300,000 tons—an increase of about 7 percent from the 1975 level. Broiler production is now expected to reach 205,000 tons—an increase of 8 percent from that of 1975. Improved feed price ratios have helped boost production expectations. Turkey production is forecast at 19,000 tons compared with 18,000 tons in 1975.

Relatively poor egg prices have caused a turn around in egg production expectations. Egg production is now forecast at 14.8 billion eggs—down about 2 percent from 1975.

**NETHERLANDS.** The Dutch are expected to reverse their 2-year decline in poultry meat production in 1976. Total poultry meat production is estimated at 315,000 tons—or the same as for 1974. Broiler meat production is forecast at 270,000 tons compared with 262,000 tons in 1975 and 267,000 in 1974. Turkey meat production is forecast at 15,000 tons compared with 14,000 tons in 1975 and 17,000 tons in 1974. Egg production is estimated at 5.1 billion eggs—down 4 percent from that of 1975.

The Dutch have lost significant poultry meat markets outside the EC. Exports to third-country markets dropped from 23,602 tons in 1974 to 16,424 tons in 1975—a decline of over 30 percent. Heavy competition from other exporting countries was the main reason. Also, intra-EC exports received high priority, thus a larger share of Dutch exports went to other EC countries.

Egg prices are expected to continue erratic in 1976 although smaller domestic supplies, especially during the second half, may lead to improved price levels for the year.

**UNITED KINGDOM.** Total poultry meat production in 1976 is forecast at a record 699,000 tons—up 8 percent from that of 1975. Broiler meat production is forecast at 510,000 tons—up over 8 percent from the 1975 level. Turkey meat production is forecast at 100,000 tons—9 percent higher than in 1975. Egg production is expected to decline 2 percent to 12.8 billion compared with 13 billion in 1975.

Recovery in broiler and turkey production is continuing; meat-type chick placements have exceeded previous years levels since May 1975. Poultry meat expansion should continue, barring an unexpected substantial increase in feed costs, because demand is expected to strengthen. Real disposable income has fallen and a further decline in living standards, along with high unemployment, may help lower priced meats, such as chicken.

**SOVIET UNION.** The effects of the severe drought in 1975 have altered the USSR poultry meat production outlook for 1976. In 1976, poultry meat output expanded sharply because of the heavy slaughter of older birds, which sharply increased the 1975 production of "other chicken meat." This category increased from 940,000 tons in 1974 to 1,072,000 tons in 1975—an increase of 14 percent. The continued expansion of the Soviet poultry complexes also increased broiler production to 189,000 tons or 14 percent in 1975.

Poultry inventory numbers were down about 9 percent on State and collective farms at the beginning of 1976 and the estimate for the private sector was also less than for 1975. Coupled with the decline in inventory numbers is the continued tight grain supply for the first half of 1976. Thus, 1976 poultry meat production is forecast to decline to about 1.4 million tons—a decrease of 12 percent or a return to the 1974 level.

Broiler meat production is forecast at 200,000 tons—an increase of 6 percent. This is an indication that the Soviets will try to utilize their recent capital investments in the

poultry complexes—especially during the second half of 1976. Other chicken meat production is forecast to decline by 15 percent in 1976 as a result of lighter culling of hens and flock rebuilding.

As noted above, 1975 poultry meat production statistics indicated an unusually heavy culling of the laying flock. Assuming that USSR planners attempt to return as rapidly

as possible to their goal of increasing egg production, 1976 egg production can be expected to reach the 57.7-billion-egg level of 1975. However, this entails egg production giving priority consideration for feedstuff supplies to egg production, a large input of young layers into the flocks as replacements, and a continued rise in the number of “eggs per layer.”

## poultry and eggs

FPE 3-76  
May 1976

### U.S. POULTRY AND EGG EXPORTS CONTINUED UPTREND IN 1975

The U.S. position as a consistent net exporter of poultry and eggs, arising from the efficient production and processing of these items by the highly developed U.S. poultry industries, was reemphasized in 1975. U.S. exports of live poultry, poultry meat, eggs, and egg products rose in 1975 and far exceeded imports of those items. Exports, valued at \$154 million, were more than 20 times greater than the \$7 million worth of imported items.

Total poultry imports declined 20 percent in 1975 with a 50 percent decrease in those of eggs—especially those in shell—and a 40 percent decline in poultry meat and meat products—largely prepared and preserved birds. This more than counterbalanced a 20 percent increase in live poultry imports. Imports from Canada, the predominant supplier in each of these categories, dropped by one-third.

The total value of poultry exports in 1975 was 16 percent higher than in 1974. The increase leaders were egg products—frozen eggs—which had a five-fold export gain, and turkey meat, which rose 28 percent. With the exception of a few minor items, all export categories were up. Frozen chickens and turkeys—whole and parts—accounted for over \$82 million of the exports. Chicks and poult, including breeding stock and hatching eggs, were another large category. Of the eggs and egg products for consumption, frozen items surpassed the level of exports for dried eggs for the first time.

The value of U.S. exports of poultry and eggs to the European Community (EC) countries increased from \$25.2 million in 1974 to \$29.6 million in 1975 and accounted for around one-fifth of total U.S. poultry exports for each year. The most important export item was turkey, which accounted for 64 percent of the value of total poultry exports to the EC in 1974 and 73 percent in 1975. Turkey parts made up 94 percent of turkey exports in 1974, but only 70 percent in 1975. The increase in whole turkey exports was largely a result of the temporary lowering of import charges (variable levies) on whole turkeys as compared with turkey parts. Eggs and egg products ranked second in value, comprising 21 percent of the total in 1974 compared with only 8 percent in 1975.

The EC has a variable levy on poultry imports, which is fixed for each quarter, and a supplementary levy, which fluctuates widely and frequently. (It can be changed at any time and put in effect with only a 3-day notice.) The EC levy

system has severely restricted U.S. poultry exports in the EC since its inception in mid-1962. Pre-1962 import charges on poultry sold to West Germany were only 15 percent ad valorem. Current German import charges for some specific items, in cents per pound, are: Whole broilers, 14; whole turkey, 10; turkey halves and quarters, 25; turkey breasts, 27; turkey drumsticks, 20; and turkey thighs, 43. These levies range from the equivalent of about 20 to 70 percent ad valorem.

The EC also has an export subsidy on whole broilers which, during 1974 and 1975, ranged as high as 6 to 7 cents per pound. These subsidies have been detrimental to the U.S. sales in certain other third country poultry markets. Since it was necessary for the EC to import sizable quantities of turkey items, export subsidies did not apply.

Total poultry exports to Canada rose 14 percent in 1975 and reached \$28.6 million. Most of this increase resulted from a 26 percent gain in exports of eggs and egg products. Total poultry meat exports gained only 3 percent. Whole broilers and fowl rose 72 and 46 percent, respectively, but turkey shipments were down 10 percent.

Japan, on the basis of a 60 percent increase in imports of total poultry products, moved from fourth-largest U.S. poultry market in 1974 to third largest in 1975, as exports reached \$24.3 million. A 48 percent gain was registered for poultry meat and a 195 percent increase for eggs and egg products.

Total poultry exports to the Caribbean area, at \$22 million, fell 5 percent, but shipments of live poultry, whole broilers, and turkeys increased. Exports to Hong Kong at \$10.6 million declined 7 percent; however, those to Singapore more than doubled and reached \$5.3 million. Of the poultry exports to Hong Kong, 71 percent were chicken parts and of those to Singapore, 81 percent were chicken parts.

While many of the countries with tariff and nontariff barriers for all or many poultry products are expected to expand their imports from the United States in 1976, these barriers do raise the price to the consumer, which generally results in less being purchased and consumed. Also, the barriers inject instability into the market, as in certain cases they can be applied capriciously. Efforts are continuing to reduce and remove as many of these impediments to trade as possible.

## Poultry Meat

Chicken meat—mainly frozen—comprised almost 60 percent of the value of U.S. poultry meat exports in 1975. Parts accounted for over 75 percent of the chicken exports. Turkey meat, comprising 32 percent of poultry meat exports, was also largely—70 percent—in the form of parts. Together, chicken parts and turkey parts accounted for \$63 million of the \$94-million poultry meat exports.

Exports of whole broilers to Mexico, which doubled, and those to Canada, which increased by 72 percent, resulted in these two countries receiving almost 60 percent of the \$9.7 million exports. While starting from a much smaller base, exports to Libya, Hong Kong, Saudi Arabia, and the French Pacific Islands had sizable increases, but those to Chile, Lebanon, the Netherlands Antilles, and the countries included under "other Asia and Oceania" fell drastically, holding the total gain to 7 percent.

Exports of chicken parts to Japan rose 44 percent to \$14 million, those to Singapore soared 2.5 times and shipments to the Canary Islands quintupled; however, exports to Barbados were halved and those to Canada dropped by 30 percent.

Exports of whole turkeys in 1975 doubled those of 1974, with almost the entire gain attributable to EC countries as exports to them rose from \$932,000 to \$5 million. Exports to Switzerland, Singapore, and Iran mounted significantly, but from lower bases. Exports of turkey parts rose 10 percent, an exports to the countries of the other continents more than covered a decline within the North American countries. The quotas imposed on turkey imports into Canada in 1973 were further tightened in 1975, and this action was reflected in a decline in U.S. exports. Not including those turkey products listed as poultry specialties, total turkey exports increased by 28 percent in 1975.

Exports of whole, fresh, or frozen fowl, at \$4.1 million, were four times 1974's exports. Exports to the countries of Asia and Oceania increased six-fold and those to Canada five-fold.

Poultry meat imports at \$933,000 were down 40 percent from the 1974 level. The predominant import is goose liver products, which comprise 65 percent of the total. Virtually all the rest—and the category that decreased most (down almost 75 percent) was prepared or preserved poultry, including game birds.

## Hatching Eggs, Chicks, and Poult

Exports of eggs for hatching, chicks, and poult increased 6 percent to \$36.8 million. Exports of hatching eggs rose 4 percent, chicks 7 percent, and poult 13 percent. Exports of hatching eggs to Canada, the largest U.S. recipient, climbed 30 percent to \$8.2 million, and shipments to Mexico and Ecuador made notable gains. Part of these increases were counterbalanced by decreases in exports to the Dominican Republic (down \$700,000), Argentina (down \$200,000), and EC countries (down \$400,000).

Exports of chicks rose to \$19.3 million as Guatemala, the EC countries, Spain, Turkey, Iran, Japan, and Pakistan had sizable increases that more than compensated for decreases to Mexico, Brazil, Canada, and South Vietnam.

Poult exports rose from \$478,000 to \$541,000. While fewer went to Canada, Venezuela, and Japan, more were shipped to Mexico, Greece, Spain, countries in Central and South America, and Asia.

Imports of chicks in 1975, all from Canada, jumped 32 percent over those in 1974 to a level of \$2.2 million. Imports of other live poultry, 98 percent of which come from Canada, rose 6 percent to a value of \$1.25 million.

## Eggs and Egg Products for Consumption

U.S. exports of eggs for consumption—including processed—increased in 1975. The drop in exports of dried eggs by almost half was more than compensated for by gains in frozen eggs and eggs in shell for consumption, as total exports rose from \$12.6 million in 1974 to \$14.1 million in 1975. The drop in exports of dried eggs was to Europe, where production was up. Exports to the EC fell from \$3.5 million to \$934,000, and to Switzerland from \$895,000 to \$444,000. The increase in frozen eggs was to Japan, to which shipments increased from \$502,000 to \$4 million. Exports of shell eggs to Canada were large in the first 6 months, before quotas were imposed, and U.S. dried and frozen eggs displaced some of those traditionally imported from European suppliers. Thus exports to Canada rose to \$3.8 million, compared with \$3.3 million in 1974.

Imports of egg products are virtually nonexistent. Imports of eggs in shell, which include hatching and certain specialty aged eggs from China and Hong Kong, decreased from \$5.8 million to \$3 million, with those from Canada declining from \$5.3 million to \$2.3 million.

## Outlook for 1976

While continuing stagflation in a number of countries may affect poultry consumption and/or trade by limiting personal purchasing power and foreign exchange availability—and while nontariff restrictions will continue to hamper trade—exports from the United States of poultry products, especially poultry meat, are forecast to increase substantially in 1976 over those of 1975.

The value of U.S. exports of poultry products in the first 3 months of 1976, at \$47.7 million, was double the \$23.3 million exported during the first quarter of 1975. This increase was well distributed over the markets.

Unit values for most of the export items were higher in the first 3 months of 1976, compared with the same period of 1975. This situation may change somewhat as the year progresses. On a quantity basis, exports of poultry meat rose 79 percent and eggs and egg products increased 30 percent. Very large gains were seen for fowl and turkeys.

While exports to individual countries and areas that have been considered traditional customers for many of the items will fluctuate, a strong aggregate increase is foreseen for 1976. Additionally, as a result of rapid gains in consumption resulting from expanding oil revenues and some displacement of products formerly supplied by other coun-

tries, increases in U.S. exports to the Middle Eastern countries are occurring. The most dramatic example is the recent sale of 35,000 metric tons of broilers to Iraq, equal to one-third to one-half of the poultry meat exported from the United States in 1975.

### WORLD POULTRY MEAT PRODUCTION TO INCREASE 5 PERCENT IN 1976

#### POULTRY MEAT PRODUCTION

Poultry meat production in the major commercial producing countries in 1976 is expected to reach 15.5 million tons, <sup>1/</sup> about 5 percent greater than in 1975. Broiler production, which comprises around two-thirds of all poultry meat production, is forecast to increase about 7 percent, reaching 10.3 million tons; turkey meat, which makes up some 10 percent of all poultry meat production, is expected to increase around 9 percent. Production of all other poultry meat categories is expected to decline.

Returns to producers of poultry meat in the United States are expected to decline somewhat during the last half of 1976, compared with the last half of 1975. Feed prices are expected to remain fairly stable (depending on 1976 harvests) but product prices may weaken as a result of a greater availability of other meats.

In 1976, the United States is expected to produce a total of 5.3 million tons of poultry meat—35 percent of all poultry meat production in the major producing countries, including 40 percent of the broilers and 58 percent of the turkeys. U.S. broiler and turkey production is expected to increase about 10 percent each in 1976.

Poultry meat production in the European Community (EC) during 1976 is expected to reach 3.3 million tons, 5 percent more than in 1975, with increases in all EC countries ranging from 2 percent in Belgium-Luxembourg to 7 percent in the United Kingdom. The largest EC producers are Italy, France, and the United Kingdom. Spain, the largest poultry meat producer outside the EC and the third largest in Europe following Italy and France, is expected to increase production almost 9 percent in 1976. The 1975 drought in the USSR has forced a reduction in poultry meat production of some 12 percent from the 1975 level back to about the 1974 production level.

#### EGG SUPPLY

Total egg production in 1976 in the major commercial countries is expected to reach 306 billion eggs—about 1 percent greater than in 1975. Important egg producing countries and the share of each in the 1976 total are: United States, 21 percent; EC, 21 percent; USSR, 19 percent; and Japan, 10 percent. Major countries in which production is expected to increase and the expected increases are: United States, 1 percent; Italy, 3 percent; USSR, 0.5 percent (in spite of the 1975 drought); Spain, 7 percent; and Japan, 2 percent. Decreases in production are expected in Canada, Argentina, Belgium-Luxembourg, Denmark, France, West Germany, and the United Kingdom.

#### OUTLOOK FOR MAJOR COUNTRIES

**UNITED STATES.** Broiler production in 1976 is running at record levels, with first-quarter production up 15 percent from that of a year earlier. However, production for all of 1976 is expected to be up by only 10 percent. Eggs set for broilers and chicks placed through mid-May were 11 and 10 percent greater, respectively, than in 1975.

Cost/price relationships may remain favorable for broiler producers through summer but probably will be less so in the fall. Production and marketing costs during October-December may be the same as or slightly below year-ago levels. Favorable cost expectations notwithstanding, producers will probably obtain smaller returns than last fall because of lower broiler prices expected to result from strong competition by other meats and normal weakening seasonal demand.

An increase of around 10 percent to 906,000 tons also is expected in turkey meat production during 1976. Poulets hatched were 16 percent above the year-earlier level during January-March but only 6 percent greater in April. Also turkey eggs in incubators on May 1 were 6 percent greater than on May 1, 1975. Turkey meat stocks on May 1 totaled 115 million pounds compared with 195 million on January 1 and 180 million on May 1, 1975.

<sup>1/</sup> All tons are metric.

By midyear stocks are expected to be back to around 150 million tons, compared with 193 million on July 1, 1975; however, lower prices for competing meats during the last half of 1976 may hold turkey prices below second-half 1975 prices.

U.S. exports of poultry meat are expected to increase in 1976 as a result of large sales to Iraq and possible sales to other nontraditional areas.

U.S. egg production is expected to increase by 1.5 percent during 1976 to around 65.3 billion eggs. While the number of layers is expected to decline by more than 2 percent, production per bird is expected to increase by around 4 percent. About 4 percent more replacement pullets entered the laying flocks during January-March, but 6 percent fewer during April-June than during comparable periods in 1975. Layers being molted and with molt completed on May 1 amounted to 17.1 percent in 1976, compared with 16.4 percent in 1975.

**CANADA.** Egg production in Canada during 1976 is forecast at 5.2 billion eggs, 2 percent less than in 1975. As in the United States, consumption of eggs has been declining. To stabilize egg prices, the Federal and Provincial Governments have reestablished the Canadian Egg Marketing Agency and have put quotas on egg imports. The quota for the United States for 1976 is 100,000 cases of shell eggs. However, the amount may be increased through supplementary quotas. Also, there are additional quotas for egg products.

Total 1976 poultry meat production is forecast at 436,000 tons, 7 percent greater than in 1975. Projected broiler output at 307,000 tons is some 6 percent greater than in 1975. Turkey production, forecast at 95,000 tons, is 10 percent above the 1975 level. Revised estimates for 1976 are 2 percent less for broilers and 5 percent less for turkeys than shown in the March report.

**JAPAN.** Broiler meat production in Japan in 1976 is forecast at 640,000 tons (4 percent greater than in 1975) in response to higher product prices and stable feed cost. Japan's total poultry meat output for 1976 is forecast at 777,000 tons, up 3.3 percent from the 1975 level. A continuing increase is expected in demand for poultry meat as a substitute for higher priced pork.

Japan is the world's third largest egg producer, with 1976 production estimated at 30.5 billion eggs, 2 percent greater than in 1975.

**EUROPEAN COMMUNITY.** Total poultry meat production in the EC during 1976 is forecast at 3.3 million tons, 5 percent greater than in 1975, with all countries forecasting some increase in output.

Egg production is forecast to decrease slightly from 63.7 billion in 1975 to 63.4 billion in 1976. Small gains expected in the Netherlands and Italy are more than offset by expected declines in the other EC countries except Ireland, which remains unchanged.

About two-thirds of EC poultry meat output consists of broilers. France is the largest producer, followed closely by Italy and the United Kingdom (Spain is the largest broiler producer in all of Europe and ranks third as a world producer behind the United States and Japan).

Turkey production in the EC remains relatively small compared with U.S. production. Total EC output of 409,000 tons in 1975 and projected production of 445,000 tons in 1976 are less than half the U.S. total for each year. Italy is the leading producer, followed by France and the United Kingdom. The three countries produce 91 percent of all EC turkey meat.

The EC accounts for a substantial share of world trade in poultry products. A large portion of EC export-import trade is intra-Community. West Germany is the major importer, receiving most of its foreign poultry meat from the Netherlands, France, and Denmark.

Although the Netherlands is not one of the top three EC poultry producers, it is the largest exporter, shipping mostly to other EC countries. Denmark is also a substantial exporter of poultry meat. Recent non-EC sales include a sale by Denmark of 3,000 tons of broilers to Cuba, 1,000 tons of broilers and 100 tons of hens to the USSR, and a sale by the Netherlands of approximately 1,200 tons of broilers to the USSR.

**Changes in EC Gate Prices and Levies.** New gate prices and variable levies were set on May 1 for the second quarter of 1976 at about the same level for all poultry and poultry products as set on February 1 for the first quarter. (Gate prices and variable levies are set quarterly.) Supplementary levies, which may be changed at any time to equalize the differences between offer prices and gate prices, experienced several changes from February 1 through June.

The July 1 supplementary levies, as compared with those of February 1, were higher for whole turkey, turkey drumsticks, and turkey thighs, and lower for turkey halves and quarters, turkey breasts, and boned poultry, with practically no change for broilers or broiler parts.

The July 1 ad valorem equivalent of total import charges (variable levy, supplementary levy, and monetary compensatory amounts) on the West German market ranged from 17 to 26 percent on broilers and broiler parts and from around 28 percent on whole turkeys to 82 and 85 percent, respectively, on turkey drumsticks and thighs.

## U.S. EXPORTS OF POULTRY, POULTRY AND EGG PRODUCTS INCREASE, IMPORTS DECLINE

The value of poultry and poultry and egg product exports set another record in fiscal 1976, rising by 55 percent to \$198.2 million compared with \$127.8 million in 1975. (All years in this report are the fiscal year, July 1-June 30, period.)

The favorable trade balance in poultry items widened even further in 1976 as imports fell to \$7.1 million from the \$8.9 million level of 1975. U.S. exports of most poultry items increased, and in some cases—turkey and fowl meat and turkey poult—the value more than doubled. The export value of poultry meats rose 79 percent, live poultry 29 percent, and shell eggs and egg products 14 percent.

On a value basis, poultry meat comprised 68 percent of total poultry and egg exports. Young chickens, whole and parts, comprised 37 percent of total exports and 55 percent of total poultry meat exports. Turkey meat exports were 21 percent and 31 percent respectively. Sixteen percent of total exports in 1976 were eggs and egg products with the largest component, 63 percent, hatching eggs. Live poultry exports accounted for 15 percent of total exports with chicks providing 70 percent of this value.

Generally, the gain in exports on a quantity basis paralleled that of export value.

The largest markets for U.S. poultry and poultry and egg products continued to be Canada (\$42,215,000), European Community (\$39,989,000), Japan (\$29,570,000), the Caribbean countries (\$23,953,000), Hong Kong (\$13,974,000), and the Mideast-Persian Gulf area (\$11,400,000). These areas accounted for 81 percent of the U.S. exports of poultry and poultry products, although U.S. products moved to more than 75 countries in 1976.

Large growth rates in exports were seen to the Mideast-Persian Gulf area (+201 percent) due to broiler shipments to Iraq; Japan (+84 percent) based on large growths in broiler parts and fowl; Canada

(+79 percent) based especially on the large increases in broilers and turkeys; Mexico (+65 percent) with significant growths in all areas, but especially in shell egg and egg products; and to the EC (+61 percent) where a strong increase in poultry meat more than compensated for slight declines in shell egg and egg products and live poultry.

### Poultry Meats

U.S. broiler meat exports in 1976 rose to 183.2 million pounds, 51 percent over those of 1975. The export value increased by 70 percent. Approximately 78 percent of the broiler exports were parts, moving chiefly to Japan, Hong Kong, Jamaica, and Singapore. The percentage of whole broilers, 22 percent, grew slightly in 1976 due to the beginning of shipments for the 77-million-pound sale to Iraq.

Turkeys, both whole and parts, had large export gains in 1976, rising by a total of 82 percent in volume and 104 percent in value. The leading U.S. markets were Canada, Switzerland, and the EC.

Exports of fowl meat quintupled in 1976 to \$7.7 million as exports to Canada and Japan soared. Large shipments also moved to Switzerland and Hong Kong. Other poultry meats, at \$4.6 million, increased 17 percent as shipments to Japan, Mexico, and the Netherlands Antilles increased.

Exports of poultry livers, at \$3.1 million, rose 42 percent based on increases to the EC, Saudi Arabia, and Bermuda. Canned poultry, at \$2.4 million, rose 40 percent largely based on Canada, our number one market, more than doubling imports.

### Other Poultry Products

The value of shell eggs and egg products exported, at \$33.3 million, rose 14 percent from that of 1975. While exports of dried eggs declined 54 percent, larger exports of frozen eggs and shell eggs, table and hatching, more than compensated.

Increased exports of hatching eggs to Canada, which took half of this category in 1976, and to the EC more than compensated for a decline in those to the Dominican Republic. A drop in exports of dried eggs to the EC, Canada, and Japan accounted for much of the 54-percent overall slump in this category, but there were also decreases to many of the smaller markets. Exports of frozen and otherwise preserved eggs continued to grow and exceeded dried eggs in the value of shipments. Strong increases in shipments to Japan and Canada led the total rise.

Live poultry exports at \$29.9 million rose 29 percent with all categories showing relatively strong gains. Very substantial increases occurred in exports to Canada of turkey poult and other live poultry.

## Imports

Imports of total poultry products at \$7.1 million declined 20 percent in 1976 compared with those of 1975. This was due to a 58 percent drop in the import of eggs, especially egg in shell from Canada, which fell from \$4.3 million in 1975 to \$1.3 million in 1976. Imports of other egg products, preserved (aged) eggs from China and the Eastern countries, increased slightly. Poultry meat items, the largest component of which is processed liver products from France, rose 47 percent. Live poultry was up 19 percent largely due to larger imports of baby chicks from Canada. In 1976, live poultry comprised 51 percent of total poultry imports, shell eggs and egg products 29 percent, and poultry meats 20 percent.

FPE 6-76  
October 1976

### WORLD POULTRY MEAT PRODUCTION TO INCREASE 6 PERCENT IN 1976

#### Poultry Meat

Poultry meat production in the major commercial producing countries during 1976 is expected to reach 15.7 million tons, <sup>1/</sup> about 6 percent more than in 1975 and slightly above earlier forecasts. Broiler production, which comprises around two-thirds of all poultry meat production surveyed, is forecast to increase 8 percent, reaching 10.4 million tons; turkey meat, which makes up 10 percent of all poultry meat production, is expected to increase 11 percent. Production of all other poultry meat categories is expected to decline.

Returns to producers of poultry meat in the United States are declining during the last half of 1976 compared with the last half of 1975. Feed prices are expected to remain relatively stable (depending on 1976 harvests), but product prices are weakening as a result of greater availability of poultry and other meats. U.S. broiler and turkey production is expected to increase about 13 percent and 14 percent, respectively, in 1976.

In 1976, the United States is expected to produce 5.4 million tons of poultry meat—35 percent of the poultry meat production in the major producing countries. By category of world production, the United States produces approximately 40 percent of the broilers and 58 percent of the turkeys; however, it produces only 15 percent of the chicken meat from birds over 16 weeks of age and 4 percent of the poultry meat under the “other poultry meat” category.

U.S. exports of poultry meat are expected to increase in 1976 to a record level of 175,000 tons (386.6 million pounds), as there are especially large increases in broiler meat shipments resulting from strong sales both to traditional markets and nontraditional markets such as Iraq. Other categories are forecast to increase to varying extents over 1975 levels.

Poultry meat production in Western Europe in 1976 is forecast to increase by 6 percent to 4.3 million tons. Of that quantity, production in the European Community (EC) is expected to reach 3.3 million tons, also 6 percent more than in 1975. All EC countries are expected to show increases, ranging from 2 percent in Belgium-Luxembourg to 8 percent in Italy. The largest EC producers are Italy, France, and the United Kingdom.

Spain—the largest European poultry meat producer outside the EC and the third largest in Europe following Italy and France—is expected to increase production almost 11 percent to 700,000 tons. Most of the increase is in broilers, of which Spain is the largest producer in Europe and ranks third as a world producer behind the United States and Japan.

The 1975 drought in the USSR has forced a reduction in poultry meat production of some 12 percent from the 1975 level back to the 1974 production level. The decrease is occurring in all categories except broilers, which is witnessing a small growth; however, broilers comprise only 12 to 14 percent of the total poultry meat production there. Small growth rates are forecast for some of the East European countries, however, expansion of 15-20 percent is predicted for the major producers of Hungary, Poland, and Romania.

Growth rates in poultry production of 8 percent, 10 percent, and 9 percent are forecast for Japan, Canada, and Brazil, respectively, the other larger producing countries.

#### Eggs

Total egg production in 1976 in the major commercial countries is expected to reach 305 billion eggs—about three-quarters of 1 percent greater than in 1975. Important egg producing countries and the share of each in the 1976 total are: United States, 21 percent; EC, 21 percent; USSR, 19 percent; and Japan, 10 percent. Major countries in which produc-

<sup>1/</sup> All tons are metric.

tion is expected to increase and the expected increases are: United States, 1 percent; Italy, 3 percent; Spain, 5 percent; and Japan, 2 percent. Notable de-

creases in production are expected in Australia, Canada, Denmark, Portugal, the United Kingdom, and the USSR.

December 1976

## WORLD POULTRY TRADE, 1974 TO 1975: EGGS HIGHER, POULTRY MEAT STEADY

Imports of eggs during 1975 by the eight leading egg importing countries for which data are available totaled 5,931 million shell eggs and 65,000 tons<sup>1</sup> of egg products<sup>2</sup>. These totals represent increases of 6 percent for shell eggs and 2 percent for egg products, compared with 1974 levels. Preliminary estimates for these same countries for 1976 and forecasts for 1977 indicate an increase in imports of almost 28 percent for shell eggs and 6 percent for egg products in 1976, with additional marginal increases in 1977.

Poultry meat imports by these eight countries, at 387,000 tons in 1975, were about the same as in 1974. However, estimates for 1976 and forecasts for 1977 indicate that such imports by these countries may increase by 1 percent and 4 percent, respectively.

In addition to the eight selected countries shown in the tables, there are other areas that import sizable quantities of eggs and poultry meat, including the Middle Eastern countries, whose imports have been expanding rapidly; the Soviet Union; and smaller, traditional markets.

Eggs come largely from France, Eastern Europe and Israel, with some egg products from the United States. Poultry meat, principally broilers, comes largely from France, Denmark, the Netherlands, and Eastern Europe, and more recently from the United States. Imports, especially of broiler meat, appeared to be increasing rapidly in 1976, perhaps doubling the approximately 75,000 tons imported by these other countries in 1975. The United States is gaining a much larger share of this trade.

During January-October 1976, U.S. exports to all destinations reached 144,000 tons of poultry meat and 282 million shell eggs, for increases of 86 percent and 28 percent, respectively, over the same period in

1975. However, U.S. exports of egg products, including albumin, during this same period were 2,424 tons, only 51 percent of the 1975 export level.

### Shell Eggs

World trade in shell eggs continued to rise in 1975, with West Germany remaining the leading importer. Of the 5,931 million shell eggs imported by the eight countries noted, Germany imported 3,451 million or 58 percent, and Hong Kong 1,037 million or 17 percent.

West Germany obtained 50 percent of its imported shell eggs from the Netherlands and 35 percent from Belgium/Luxembourg. Only 3 percent came from countries outside the European Community (EC). Hong Kong's largest supplier was the People's Republic of China (PRC), which supplied 84 percent; over 2 percent—25 million eggs—came from the United States. Of the other countries for which data are available, the United Kingdom's largest supplier was France, while the East European countries were the principal exporters to Switzerland and Austria. Italy's principal suppliers were East European countries in 1974, but the EC held the leading position in 1975. Canada's imports came almost entirely from the United States, and France's imports were largely from other EC countries.

### Egg Products

Imports of egg products by the eight large importers increased from 64,000 tons in 1974 to 65,000 in 1975. Imports by Japan accounted for 37 percent of the total in 1974 and 44 percent in 1975. West Germany, with about 15 percent each year, ranked second in both 1974 and 1975.

The principal supplier of egg products in 1974 was the Netherlands, which is also a sizable importer. In

<sup>1</sup>All tons are metric.

<sup>2</sup>Trade figures in this report represent imports by eight large importers from whom information is available rather than all importers.

1975 Australia resumed its characteristic role as the largest exporter of egg products, supplying 15 and 20 percent of the eight-country total for 1974 and 1975, respectively. The PRC ranked third with 14 percent in 1974 and 10 percent in 1975. The combined exports of Australia, the Netherlands, and the PRC made up 46 percent of the exports in both 1974 and 1975. On an area basis, Europe was the largest supplier with 41 and 38 percent, while Asia and Oceania (considered as one area) ranked second with 33 and 35 percent for 1974 and 1975, respectively.

### Poultry Meat

Imports of poultry meat by the eight importing countries in 1975 totaled 387,000 tons, approximately the same as in 1974 but some 1.5 percent less than in 1972 and 1973. West Germany imported 268,000 tons in 1975, or 69 percent of the total imports by the eight countries. Following West Germany were Hong Kong (11 percent), Switzerland (6 percent), and Japan (6 percent). Imports by the remaining four countries (Austria, Singapore, the United Kingdom, and Greece) increased from 8 percent in 1974 to almost 10 percent in 1975.

The principal exporters of poultry meat to these selected countries in 1975 were: EC countries, 65 percent; East European countries, 15 percent; United States, 10 percent; and the PRC, 5 percent. The United States increased its share of the market to 10 percent from 9.5 percent in 1974. The East European countries and the PRC made slight gains in market shares, while other supplying areas showed slight declines.

West Germany, the world's largest importer, obtained 84 percent of its imports from other EC countries, with the Netherlands—Germany's largest single country supplier—furnishing 67 percent of its imports. East European countries supplied 13 percent of Germany's imports. Hong Kong's imports came largely from the PRC (37 percent) and the United States (27 percent), while EC countries supplied some 17 percent.

The PRC share of the market increased from 34 to 37 percent, while the U.S. share dropped from 35 to 27 percent. Japan's principal suppliers were the United States (56 percent) and the PRC (30 percent). Of the remaining 14 percent of Japan's imports, no single country supplied more than 3 percent. The United States and the EC countries had decreased sales to Japan, while the PRC share rose.

Switzerland's principal suppliers were the East European countries, with 56 percent, and the EC countries, with 35 percent. The United States ranked third, with 6 percent. The principal suppliers to Austria were the East European countries—mostly Hungary, Czechoslovakia, and Poland—while the principal suppliers to the United Kingdom and Singapore were the United States and the EC countries.

Total exports by the United States to the eight countries increased by around 9 percent, with gains to Singapore, Japan, the United Kingdom, Switzerland, and Austria more than compensating for declines to West Germany, Hong Kong, and Greece.

### Outlook

During 1977, poultry meat production may continue at about the 1976 level in spite of the much less favorable price condition that arose in 1976 with heavier production of poultry and competing meats. Even though egg prices and profits were good in 1976, there is no indication that world production of eggs will increase substantially in 1977. Thus, the price and profit outlook for eggs should continue to be favorable. (Production forecasts for 1977 will appear in a forthcoming Foreign Agriculture circular on poultry and eggs.)

World trade in poultry meat—especially broilers—increased in 1976 as trade to both traditional markets and the rapidly expanding Middle Eastern markets grew sizably. Most 1977 forecasts indicate that this higher level of trade will continue and may increase further. Trade in eggs and egg products after the growth in 1976 is forecast to stabilize in 1977.
